Like last year, the ESWC participants have the possibility to take part in two different RFID experiments:

 - **RFID Kiosk Experiment**

After RFID experiments at ESWC2009 and ESTC2009, STI Innsbruck added and extended the available services and provides an advanced experience with more sophisticated hardware. **To participate in the RFID Kiosk Experiment, the participants have the possibility to register for the RFID-tag already in the registration form of the conference.**
More information on the RFID Kiosk Experiment available as
 download (pdf)
or on the website:
 http://iot.sti2.at/wordpress/

 - **Social Experiment: LiveSocialSemantics**

In collaboration with **SocioPatterns, KMi,** and **CeRC**, all ESWC2010 participants are cordially invited to participate in the social experiment:
LiveSocialSemantics
, where the Semantic Web, the Social Web, and the Physical World will come together to create a rich integrated network of information. Acquiring and integrating these heterogeneous, but overlapping, data sources will enable us to provide a range of novel services to conference attendees, to enhance the overall social experience during the conference.
All interested conference participants can get their RFID-tags onsite at the Social Experiment booth.
For more information about the Social Experiment at ESWC2010, please download the
 information sheet (pdf)
.
